

1 **ABSTRACT**

2 A method facilitating secure financial transactions using email is presented  
3 comprising the steps of receiving bill data at a server implementing the method,  
4 and generating an email message to a recipient with information including at least  
5 a portion of the received bill data. The amount of bill data included in the email  
6 message is based, at least in part, on the email address of the recipient.
